EXPERIMENT - 09

SHOBBIKA T **240701502**

Design input forms that validate data (e.g., email, phone number) and display error messages.

In this experiment, a **web-based Campus Cleanliness Feedback Form** was developed. This form allows users to enter their email, phone number, rate campus cleanliness, and provide suggestions.

The form is designed with client-side validation, ensuring that users enter correct email and phone number formats before submission. Error messages are displayed instantly if invalid data is entered, improving accuracy and user experience.

TOOLS USED:

- HTML (for structure)
- CSS (for styling)
- JavaScript (for validation logic)
- Validator.js library

CODE :

Index.html:

```
<!DOCTYPE html>
<html lang="en">
<head>
    <title>Campus Cleanliness Feedback</title>

    <script
src="https://cdnjs.cloudflare.com/ajax/libs/validator/13.9.0/validator.min
.js"></script>
```

```
    <style>
        body {
            font-family: Arial;
            background: linear-gradient(to right, #cce7ff, #99ccff);
        }

        form {
            background: #ffffff;
            padding: 25px;
            width: 320px;
            margin: 80px auto;
            border-radius: 12px;
            box-shadow: 0 0 15px rgba(0,0,0,0.2);
        }

        h2 {
            text-align: center;
            color: #003366;
        }

        label {
            font-weight: bold;
            color: #003366;
        }

        input, textarea, select {
            width: 100%;
            padding: 8px;
            margin: 5px 0 10px 0;
            border: 1px solid #99ccff;
            border-radius: 6px;
        }

        button {
            background: #0066cc;
            color: white;
            padding: 10px;
            border: none;
            width: 100%;
            border-radius: 6px;
```

```
            cursor: pointer;
        }

        button:hover {
            background: #003366;
        }

        span {

    color: red;
    font-size: 12px;
    display: block;
    margin-bottom: 10px;
        }
    </style>
</head>

<body>

<h2>Campus Cleanliness Feedback (outdoor)</h2>

<form id="feedbackForm">

    <label>Email:</label>
    <input type="text" id="email">
    <span id="emailError"></span>

    <label>Phone:</label>
    <input type="text" id="phone">
    <span id="phoneError"></span>

    <label>Cleanliness Rating:</label>
    <select id="rating">
        <option value="">Select</option>
        <option>Excellent</option>
        <option>Good</option>
        <option>Average</option>
        <option>Poor</option>
    </select>
```

```
    <label>Suggestions:</label>
    <textarea id="feedback"></textarea>

    <button type="submit">Submit</button>

</form>

<!-- LINK JS HERE (CORRECT PLACE) -->
<script src="script.js"></script>

</body>
</html>
```

[script.js]():

```
document.getElementById("feedbackForm").addEventListener("submit",
function(e) {
    e.preventDefault();

    let email = document.getElementById("email").value.trim();
    let phone = document.getElementById("phone").value.trim();

    let emailError = document.getElementById("emailError");
    let phoneError = document.getElementById("phoneError");

    emailError.textContent = "";
    phoneError.textContent = "";

    let isValid = true;

    if (!validator.isEmail(email)) {
        emailError.textContent = "Enter a valid email";
        isValid = false;
    }

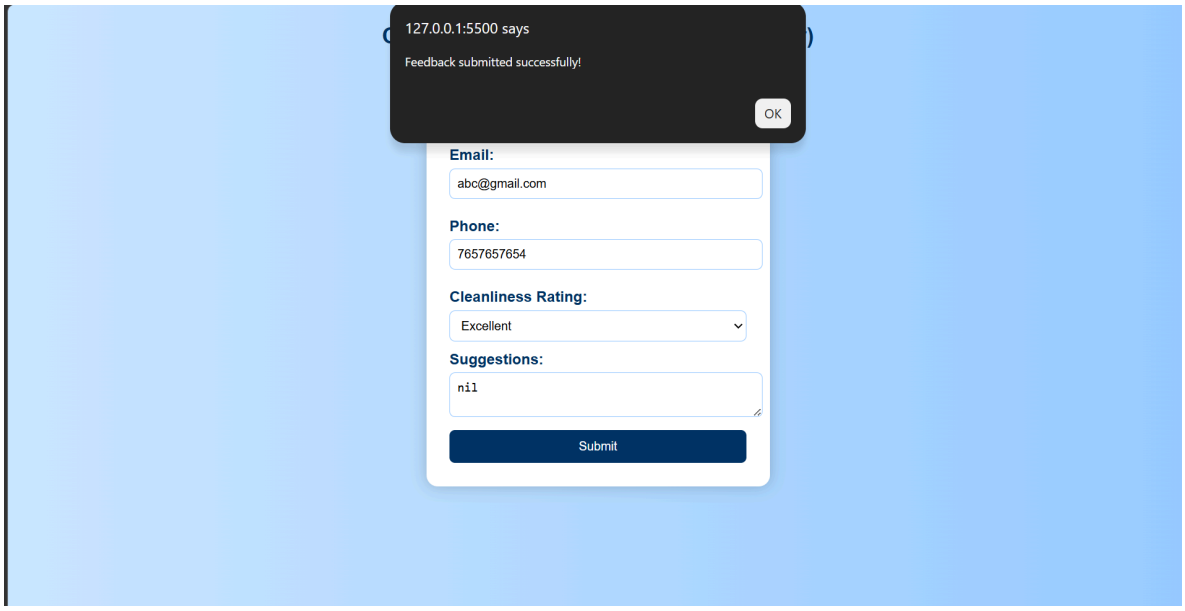
    if (!validator.isMobilePhone(phone, 'en-IN')) {
        phoneError.textContent = "Enter a valid phone number";
        isValid = false;
    }
```

```
    if (isValid) {
        alert("Feedback submitted successfully!");
    }
});
```

Features Implemented:

- **Email Validation:**
  The email input is validated using the `isEmail()` function from Validator.js. If the entered email is invalid, an error message is displayed below the input field.
- **Phone Number Validation:**
  The phone number is validated using `isMobilePhone()` for the Indian format (`en-IN`). Invalid numbers trigger an error message.
- **Error Message Display:**
  `<span>` elements are used to display error messages. These are styled using CSS (`display: block`) so that the messages appear on a new line below each input field.
- **Form Submission Control:**
  The `preventDefault()` method is used to stop form submission if validation fails. This ensures that incorrect data is not submitted.
- **User Feedback:**
  When all inputs are valid, a success message is shown using an alert box.
- **Styling:**
  CSS is used to create a clean and user-friendly interface with proper spacing, colors, and layout.

OUTPUT:



127.0.0.1:5500 says
Feedback submitted successfully!
