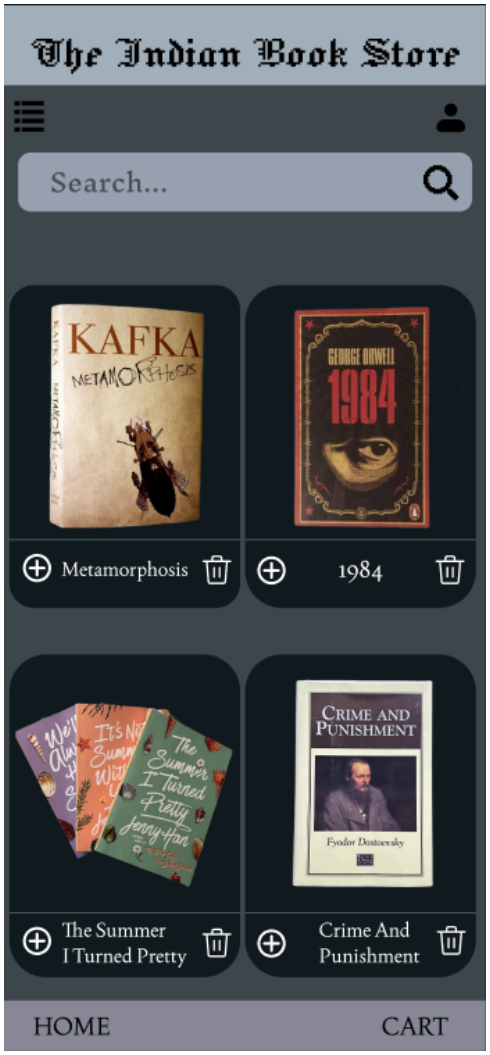
EXPERIMENT 1

SHOBBIKA T **240701502**

COMPARISON OF UI DESIGN BETWEEN TWO FIGMA CREATION.

BAD DESIGN :



1. Design Style

- Uses a dark theme with book cards displayed in a grid layout.
- The layout is simple and consistent, but it does not include visual grouping or category sections.

- All books appear in one list, which makes the interface look uniform but less informative and more spacious.

2. Content

- Each book card contains:
    - Book image
    - Book title
    - Add (+) icon
    - Delete (trash) icon
- However, the design does not provide genre or category information, so users cannot easily identify the type of books.

3. Navigation

- Includes:
    - A hamburger menu icon
    - A search bar
    - Home and Cart buttons at the bottom
- Navigation options are basic and allow users to search or move between main pages, but there are no quick shortcuts to browse book categories.

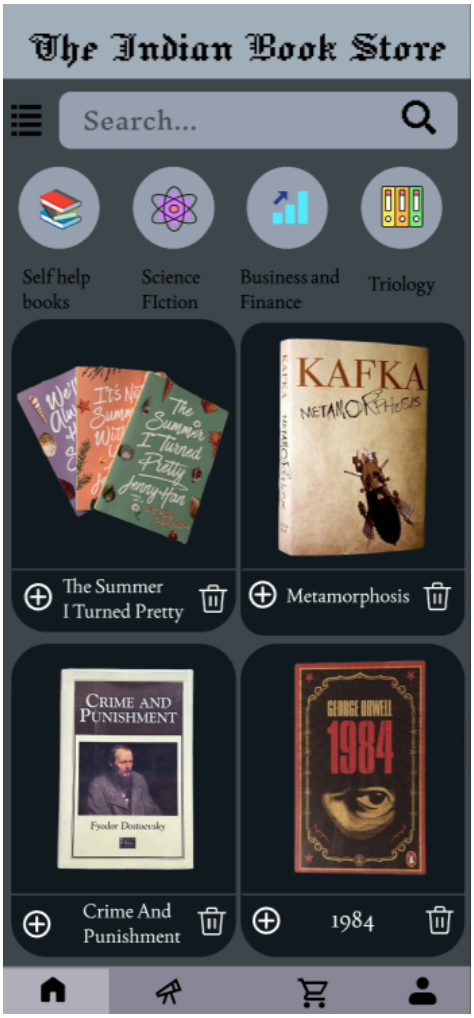
4. Usability

- Users can browse and add books to the cart easily using the add (+) button.
- However, since books are not grouped into categories, users must manually scan the entire list to find specific types of books.
- This can slightly increase the time required to locate a particular genre.

5. Purpose

- Focuses mainly on displaying books for selection and purchase.
- The interface prioritizes product display and basic shopping actions.

GOOD DESIGN :



1. Design Style

- Maintains a similar dark theme but introduces additional visual elements for better organization.
- Includes category icons with labels, creating a clearer browsing structure.
- The layout looks more informative while keeping the same book card design.

2. Content

- Displays the same books as the first design.
- Adds category sections such as:
    - Self Help Books
    - Science Fiction
    - Business and Finance
    - Trilogy
- These categories help users understand and filter available books more easily.

3. Navigation

- Navigation is expanded with:
    - Bottom navigation icons (Home, Explore, Cart, Profile)
    - Category shortcuts
    - A search bar for direct searching
- This allows users to navigate through the app in multiple ways.

4. Usability

- Category icons provide faster browsing for users looking for specific genres.
- The interface supports both:
    - search-based discovery
    - category-based exploration
- This improves the overall browsing experience.

5. Purpose

- Designed to support both product browsing and category-based exploration.
- The interface helps users find books faster by organizing content into genres.

Key Differences :

- **Content Organization:** The first design lists books without categories, while the second introduces genre-based categories.
- **Navigation Options:** The second interface provides additional navigation elements like category icons and more bottom navigation options.
- **Browsing Experience:** Users can discover books more easily in the second design due to the presence of categories.
- **Information Clarity:** The second design provides more context about the books through genre labels.
- **User Interaction:** The improved navigation in the second design supports quicker exploration and easier access to different sections.
